Introduction

In the world of public health, data is extremely important. Utilizing data to inform decision making and strategic allocation of resources drives efficiency and impact.

Analyzing data to identify and respond proactively to changes in the public health landscape over time provides valuable insight for making critical, life-saving decisions.

The WMA system does just this. And, we designed our solution to meet the unique demands of rural public health departments.

The intuitive, user-friendly modules we created enhance and strengthen a health department's employee training, community outreach and education programs, health clinic scheduling and analysis of patient visit data, grant and procurement management, utilization of county-level opioid/substance use data, public health document management, and analysis of communicable disease data.

We are committed to continuously expanding the value our system delivers to our clients as we find additional rural public health needs to address.

The following is an overview of the current modules our solution delivers. We hope you enjoy reviewing what we have built and look forward to scheduling time with you to share much more about how WMA can help you improve the health and wellbeing of those you serve.

Training and Certification Module

Keeping up with employee training and certifications can be a daunting task. Many certifications require regular updates, annual, bi-annual etc. **As a result, it is critical to keep these trainings and certifications current for your entire staff.**

1. Our system allows you to create custom training/certification course categories which enable you to assign, manage, and track employee training/certifications however it works best for your organization. For example, by individual employee, department or all staff.

Upload File
Choose File No file chosen [Add](#)

Select to remove existing files 202407081247250.Clinic Slots and Blocks.pdf

[Submit](#)

2. The system then allows you to create a list of training/certifications and assign each training/certification to a category (individual, department, all staff). Training/Certifications can be listed as required or optional. If a training/certificate should be renewed you can select the frequency for which it should be renewed; Yearly, Every Two Years, Every Five Years, Every Six Years. You can also attach documents associated with each training/certification and embed training/certification documents via hyperlinks.

Training and Certification Module, cont.

- Once you have created a database of your organization's trainings/certifications, you can then assign them to employees.

The system will automatically notify employees when training/certifications are to be completed. The system will also notify the employee's manager if or when a training/certification has not been completed in the required time frame.

Document Management

Within public health there are documents that need to be updated regularly. This is often a requirement for managing various funding sources including grants and intergovernmental agreements. Keeping up with 'when and which' documents need to be updated can be difficult. Our system provides your organization with an automated resource for tracking your documents and indexing them when revisions to each document are required.

1. The system provides your organization with the ability to create customizable document categories; you could do this by department, or grant, or however you choose. In addition, the system allows for customized sub-categories to provide an additional level of organization.

2. Once you have created your categories and sub-categories you can then upload your documents.

A screenshot of a web form titled 'Edit Document Details'. It features a 'Back' button at the top left. The form is divided into two main sections: 'Edit Document Details' and 'Supporting Documents'. The 'Edit Document Details' section includes fields for Name (Community Education Presentation), Category (System Module Documents), Sub Category (Community Education), Revision Period (1 year), Date of Last Revision (02/14/2024), and Description (Presentation overview of the Community Education Module.). There is also an 'Upload File' section with a 'Choose File' button and an 'Add' button, and a 'Select to remove existing files' section with a checkbox and a file name. The 'Supporting Documents' section has similar fields for Revision Period, Date of Last Revision, and Description, along with another 'Upload File' section and a 'Submit' button at the bottom.

Document Management, cont.

- The system dashboard then provides managers and directors with an overview of when documents need to be reviewed and updated. The document management dashboard is broken up into three sections: Needing Revisions (these are documents that are due for revisions now), Up Coming Revisions (these are documents that are due for revisions within the next 90 days), and future revisions (these are documents that require revisions within the next 120 days).

Clinic Visit Scheduler

Rural Public Health Clinics often have difficulty managing their clinic visit schedules. Multiple locations spread out over long distances, staffing issues, and community needs are difficult to manage.

We have created a scheduling system to fit the complex and unique needs of rural Public Health Departments. Our system allows you to customize your clinic schedule based on your locations and staff restrictions. If you have multiple clinic locations, you can create separate schedules for each location. For example, you can block availability based on staff meeting times and lunch schedules. You can even block individual employees' time for lunch, vacation, or sick days.

1. Requesting a clinic visit is simple. Users complete an online form to request a clinic visit based on available times informed by the criteria mentioned above.

System patient scheduling form in its default state. →

Clinic Visit Scheduling Form

First Name *	Last Name *
<input type="text" value="First Name"/>	<input type="text" value="Last Name"/>

<input type="text" value="Choose location"/>	<input type="text"/>
People needing services	Clinic visit time slot *
<input type="text" value="1"/>	<input type="text" value="Choose time slot"/>

Clinic Visit Scheduling, cont.

- The user enters the basic patient information on this form. Oftentimes parents bring children to the clinic. If the Relationship to Patient is changed to parent, guardian, or grandparent, the form adds a row to the form to enter the child's name and birth date. If more than one child needs an appointment, the system allows you to specify the number of people needing services and then an option to add additional children as needed.

The screenshot shows a scheduling form with the following fields and values:

- Insurance type: BCBS
- Relationship to Patient: Parent
- Clinic visit type: Choose visit type
- Birth Date: Enter date (MM-DD-YYYY)
- Location: Choose location
- Clinic visit date: [Calendar icon]
- People needing services: 1
- Clinic visit time slot: Choose time slot
- First Name: First Name
- Last Name: Last Name
- Gender: Male
- Birth Date: Birth Date

↑ System patient scheduling form with parent scheduling their children for a visit.

- The user then selects the clinic location(s) and clinic visit date. By selecting these the system will limit the available clinic visit time slot(s) available based on the scheduling criteria profile set-up for each clinic location.

System patient scheduling form, selecting a time slot based on location and date availability. If scheduling for two patients, the system will automatically block equal time for each patient. →

The screenshot shows the scheduling form with the following fields and values:

- Location: Location A
- Clinic visit date: 11-15-2024
- People needing services: 1
- Clinic visit time slot: Choose time slot
- First Name: First Name
- Last Name: Last Name

The dropdown menu for 'Choose time slot' is open, showing the following options:

- Walk-in
- 08:30 AM - 08:45 AM
- 08:45 AM - 09:00 AM
- 09:00 AM - 09:15 AM

- 02:00 PM - 02:15 PM
- 02:15 PM - 02:30 PM
- 02:30 PM - 02:45 PM

Clinic Visit Scheduling, cont.

- After submitting a clinic visit the system places that visit on the calendar.

- Users can then click on any dates' list of visits to see a detailed list of the scheduled visits for the selected day.

From here administrators can assign staff to each visit, then print out a daily visit log for each nurse/manager so they know what the daily schedule will be. If the patient receives immunizations the user can add that information here after the patient's visit and add any necessary comments.

Clinic Visit Scheduling, cont.

8. Our **clinic dashboard** provides valuable information to managers and directors that will help them to more effectively run their clinics.

At the very top the user can specify a time period and clinic location to view reports. By default, the system displays all data in the reports.

The filter bar contains the following elements:

- Start Date:** A text input field with the placeholder text "Start Date".
- End Date:** A text input field with the placeholder text "End Date".
- Location:** A dropdown menu currently set to "All".
- Get Reports:** A blue button with white text.

- 9a. The first data section is general information, gender, age, ethnicity, and race.

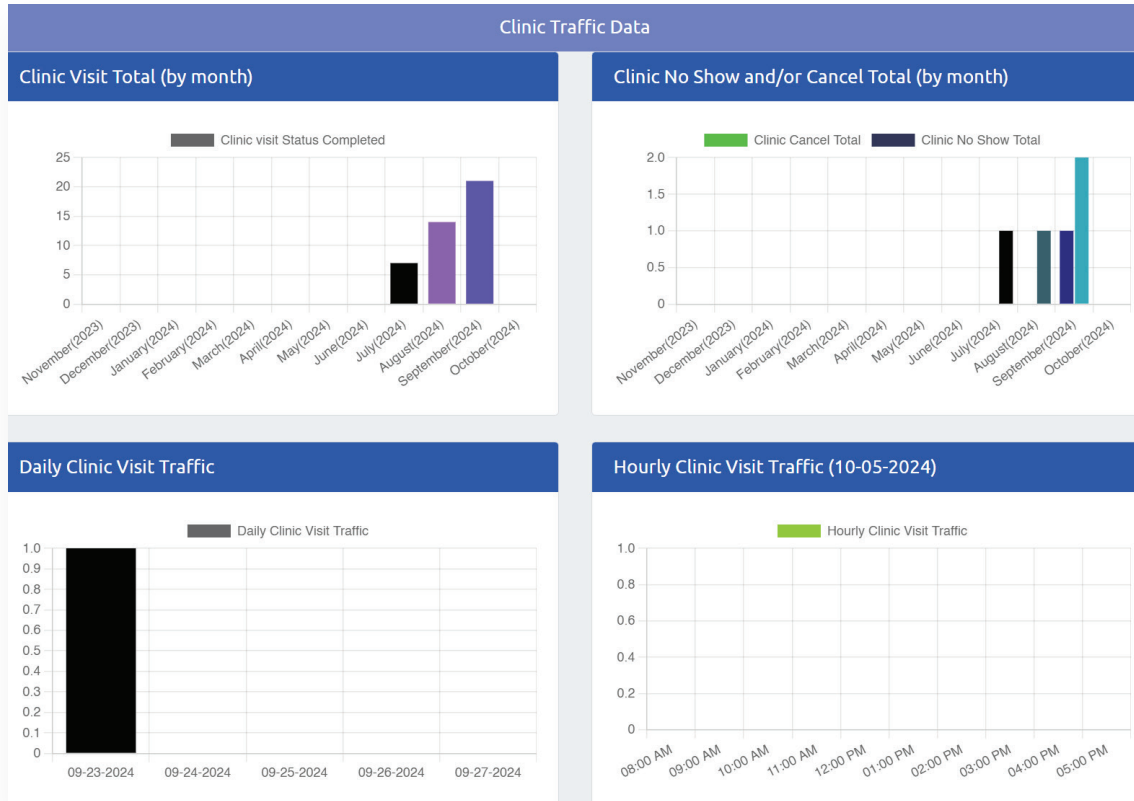

- 9a. Followed by location (if there is more than one clinic location) and visit type.

Clinic Visit Scheduling, cont.

10. The **clinic traffic data section** is used to inform administration on clinic traffic. Administration can see traffic broken down by month, day and even hourly. They can also see the volume of No Shows or Cancellations.

Clinic Visit Scheduling, cont.

- 11.** The **immunizations** section reflects all immunization data for in office and offsite immunizations. Location totals, monthly totals, weekly totals, monthly totals by type, daily totals by type, monthly totals by insurance code.

Clinic Visit Scheduling, cont.

- 12.** This section is for **offsite clinic events**. Offsite event totals by selected month and offsite event totals by type per event selected.

Community Education

Informing and educating the communities we serve is possibly the most important aspect of public health. **Knowledge is power!**

To provide our communities with education we must first communicate the educational services we provide. Curriculums and instructors can often change. Keeping up with these changes internally is difficult enough, but keeping the community we serve informed and engaged in these education services can be nearly impossible.

We have developed a process that solves these issues. In addition, our process provides a community education scheduling platform and analytics on what is being taught within the community and to whom.

1. This process starts with creating a list of community course categories. This can be customized to fit your organization.

S.No	Color	Course Categories Name	Description	Action
1		Opioid Overdose Prevention	Opioid Education and Prevention Courses	Edit Delete
2		Teen Pregnancy Prevention	Teen Pregnancy Prevention, life skills, relationship skills, and communication.	Edit Delete
3		Oral Health	Oral Health Education	Edit Delete
4		Health Zone	Nutrition and Physical Education	Edit Delete
5		Public Health Education	Various courses relating to public health	Edit Delete
6		Tobacco Free Environments	Anti-tobacco education	Edit Delete
7		Mental Health Courses	Suicide Prevention, self esteem courses, mental health education.	Edit Delete

Community education, cont.

- Next, we create a list of community courses and link them to their respective category.

In addition to linking your courses to a category, when setting up a new course, you will also assign the course presenter. This can be changed at any time if the course presenter changes for any reason.

You can also attach any files that are used for teaching this course, or any files that need to be provided to the requesting party. For example, a permission slip for courses taught at community schools. You can also link any hyperlinks that might be associated with the course.

Community education, cont.

4. Next, we create a list of requesting community organizations. These are the organizations that you will be teaching courses to.

The screenshot shows a web interface titled "Organization". At the top left is a blue button labeled "Add Organization". Below it, there is a "Show 10 entries" dropdown and a "Search:" input field. The main content is a table with the following data:

S.No	Organization Name	Location	Action
1	Yavapai Health Department		Edit Delete
2	Gila County Health Department		Edit Delete

At the bottom, it says "Showing 1 to 2 of 2 entries" and has "Previous", "1", and "Next" navigation links.

5. These community organizations can now request courses through an online form. We recommend providing your partner organizations with a QR code that links to this form. This form is mobile device friendly.

When the user selects a category the list of courses that are provided under that category will populate. When the user selects a course the description of that course will populate in the descriptions box. *It is important to be detailed in your descriptions so that community partners can easily identify the course they are looking for.*

The user then selects a week and time of day they prefer to have the course presented.

The screenshot shows a form titled "Request Community Education Course". The form contains the following fields:

- First Name * (text input)
- Last Name * (text input)
- Email * (text input)
- Organization * (dropdown menu with "Choose Organization" selected)
- Course/Event Categories * (dropdown menu with "Choose Course/Event Categories" selected)
- Course/Event * (dropdown menu)
- Description (large text area)
- Select Week * (text input) with a note: "(The course organizer will contact you to setup a specific day and time.)"
- Preferred time of day * (dropdown menu with "Morning" selected)

At the bottom right, there are "Submit" and "Reset" buttons.

Community education, cont.

- Once the form is submitted the course presenter (and their manager) will receive an email notification alerting them of the requested course presentation. The presenter will then use the system to select an exact date and time, based on their availability, to present the course.

After the presenter selects the exact date and time, and submits it to the system, the requesting party will receive an email confirmation with the dates and times along with any correspondence such as the permission slip mentioned above.

Edit Community User

Community education, cont.

- You can also view the schedule of courses for the entire team through the community education calendar. Course categories are color coded so when you look at the calendar you can quickly identify which course/category is being taught and where and when the course/category is being delivered.

- The community education dashboard provides valuable insight into what education your team is providing within the community.

Grant Management

Grants make up a large portion of public health funding. Keeping up with the number of grants and when purchase orders (PO's) need to be renewed can often be overwhelming.

We have developed a system for tracking your grants and PO's, and alerting you when to address changes or renewals.

1. Our system starts with creating a list of grants. Once you have entered all your grants you can review and modify them by accessing the grant list table.

Create New Grant Contract

Fund Code: *	Acronym: *	Name: *
<input type="text" value="Enter the Fund Code"/>	<input type="text" value="Enter the Acronym"/>	<input type="text" value="Enter the Name"/>
Contract Beginning Date: *	Contract End Date: *	Original Contract Document:
<input type="text" value=""/>	<input type="text" value=""/>	<input type="button" value="Choose File"/> No...en <input type="button" value="Add"/>
Contract Number: *	CFDA *	
<input type="text" value="Enter the Contract"/>	<input type="text" value="Enter the CFDA"/>	
FED/State/Private *	Grant Award *	
<input type="text" value="Select FED/State/Private"/>	<input type="text" value="\$ Enter the Grant Award"/>	
Revenue Code *	Amendment(s):	
<input type="text" value="Enter the Revenue Code"/>	<input type="button" value="Choose File"/> No file chosen <input type="button" value="Add"/>	
<input type="checkbox"/> No longer active	<input type="button" value="Submit"/>	

2. Once you have entered your list of grants you will then create your PO's and link them to the corresponding grant.

Create New PO

Select Grant Contract *	PO beginning date: *
<input type="text" value="Select Grant Contract"/>	<input type="text" value=""/>
PO ending date: *	PO Number *
<input type="text" value=""/>	<input type="text" value="Enter the PO"/>
Program Manager *	PO Award *
<input type="text" value="Select Program Manager"/>	<input type="text" value="\$ Enter the Grant Award"/>
Total Spent *	Total Spent as of Date *
<input type="text" value="\$ Enter the Total Spent"/>	<input type="text" value="Enter the Total Spent as of Date"/>
Redirect % Allowed *	PO documents:
<input type="text" value="Enter the Redirect % Allowed"/>	<input type="button" value="Choose File"/> No file chosen <input type="button" value="Add"/>
<input type="button" value="Submit"/>	

Grant Management, cont.

- After grants have been completed you can mark them as inactive. They will remain in the system for archival reference, but no longer be reflected on the dashboard.

The dashboard gives you a total number of active PO's and the total dollar amount of active grants.

- The dashboard also gives leadership a quick reference of what grants need PO's renewed.

This table alerts leadership of PO's that need to be renewed from 45 days out, 20 days out, and 5 days out. Helping them to plan and manage accordingly.

The image shows three stacked tables, each with a blue header and a search bar. Each table has a "Show 10 entries" dropdown and a "Search:" field. The columns are "Name", "PO End Date", "PO #", and "% Spent". All three tables display "No data available in table" and "Showing 0 to 0 of 0 entries" with "Previous" and "Next" navigation links.

Grants List (PO ending in 45 days)			
Name	PO End Date	PO #	% Spent
No data available in table			

Grants List (PO ending in 20 days)

Substance Use

Addressing substance use, spurred by our nation's opioid epidemic remains a top priority in public health. In order to develop effective strategies to fight substance use in your community you need to first know where to target your efforts. **You also need to have a way to review changes in substance use across your community as you continue to fight the good fight.**

Our system utilizes the Medical Electronic Disease Surveillance Intelligence System (MEDSIS) to create powerful analytics on overdose related data for your specific geographic area. MEDSIS is a secure web-based disease surveillance system built specifically for Arizona. All incidence of disease, which includes overdoses, must be recorded by health care providers and entered into this system.

We have developed a way to take MEDSIS data extracts and import them into our system to inform review of analytical data.

Through a simple 5-minute export/import process (specially developed by WMA) you can have your communities' overdose data in our system and be able to review powerful data that is unique to your geographic area.

This data is provided in two formats. Backend (Health department view-only data) and Community (data viewable by the community).

Backend data

will be used to help you make informed decisions about your substance use programs.

Community data

is meant to inform the public of overdose statistics within your community.

S.No	Date	Time	Distributed	Location	Type	Events	Organizations	First Time Recipient	Recipient Types	Amount Type	Quantity	Comments	Amount Given	Action
1	07-08-2024	14:55	Fentanyl Test Kit	Location A	Event	Homeless Connect Day		Yes	Law Enforcement	Single Unit	5		5	Edit Delete
2	07-08-2024	14:54	Deterra Bags	Location A	Event	AZYP Drug Take Back		No	Community Agency	Single Unit	4		4	Edit Delete
3	07-08-2024	14:54	Narcan	Location A	In-Office			Yes	Community Member	Single Unit	1		1	Edit Delete
4	07-08-2024	14:53	Narcan	Location A	Distribution Site		AZYP	No	Community Agency	Case	1		24	Edit Delete

↑ This image represents a table of Narcan distributions recorded and provides the links for creating your partner organizations list, recipient types list, and distribution events list.

Note: In addition to tracking Narcan distribution this system also allows you to track Teva or generic Naloxone, Fentanyl Test Kits, and Deterra Bag distributions.

- Once the partner organizations, recipient types, and events list have been created you can simply record each distribution using a web-based form.
- As part of the backend substance use dashboard you will have access to the Narcan distribution data.

Communicable Disease

Identifying communicable disease trends is crucial to effectively fighting them. In order to develop effective strategies to respond to various communicable diseases within our community it is important to have reliable historic data.

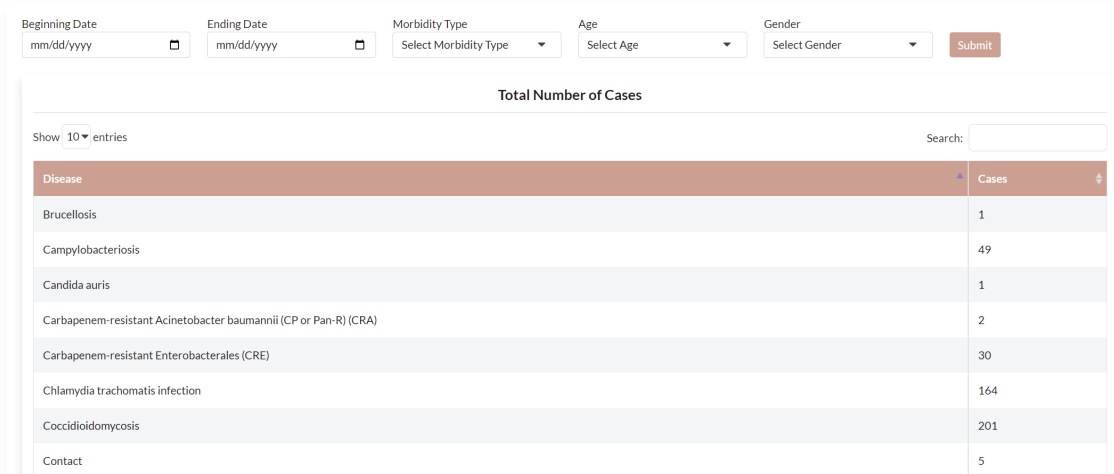

Our system uses the Medical Electronic Disease Surveillance Intelligence System (MEDSIS) to create powerful analytics on communicable disease related data for your geographic area. MEDSIS is a secure web-based centralized, person-based disease surveillance system for Arizona. All incidence of disease, which includes communicable diseases, must be recorded by health care providers and entered into this system.

We have developed a way to take MEDSIS data extracts and import them into our system for analytical data review.

Through a simple 5 minute export and import process (specially developed by WMA) you can have your communities communicable disease data in our system and be able to review powerful data.

This data is provided in two formats. Backend or health department only data and community data. Backend data will be used to help you make informed decisions about your communicable disease programs. Community data is meant to inform the public of communicable disease statistics within your community.

- 1. The Community Dashboard:** You can refine your search based on the criteria listed at the top: Beginning Date, Ending Date, Morbidity Type, Age, Gender. You can select as many or as few search items as you wish.

The screenshot shows a search interface for the Community Dashboard. At the top, there are filters for Beginning Date (mm/dd/yyyy), Ending Date (mm/dd/yyyy), Morbidity Type (Select Morbidity Type), Age (Select Age), and Gender (Select Gender), along with a Submit button. Below the filters, the title "Total Number of Cases" is displayed. A search bar is present with the text "Show 10 entries" and "Search:". The main content is a table with two columns: "Disease" and "Cases".

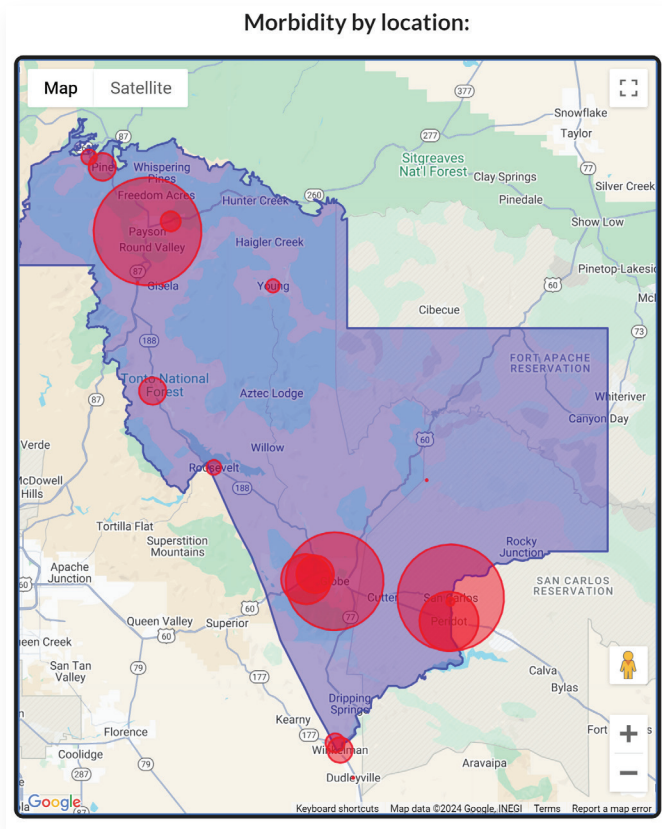

Disease	Cases
Bruceellosis	1
Campylobacteriosis	49
Candida auris	1
Carbapenem-resistant Acinetobacter baumannii (CP or Pan-R) (CRA)	2
Carbapenem-resistant Enterobacterales (CRE)	30
Chlamydia trachomatis infection	164
Coccidioidomycosis	201
Contact	5

Communicable Disease, cont.

- 2. The system provides numbers for each morbidity type, gender pie chart percentages, and age pie chart percentages.

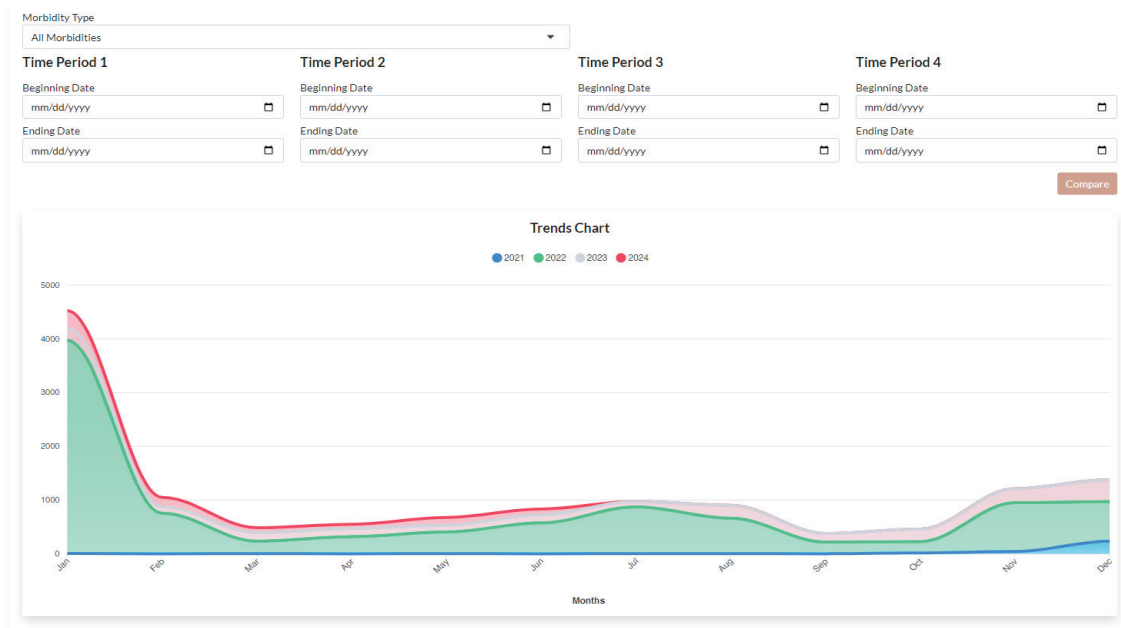

- 3. There is also a heat map indicating geographic areas of higher concern.

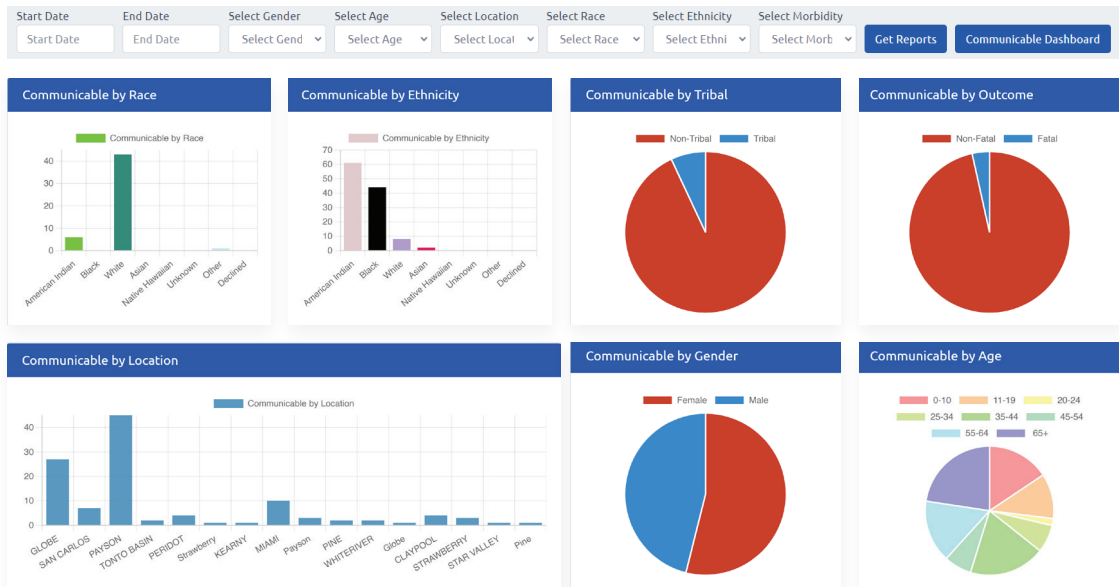

Communicable Disease, cont.

4. You can also review morbidity trends. You can select up to four time periods to compare. You can compare all morbidities or define a specific morbidity type.

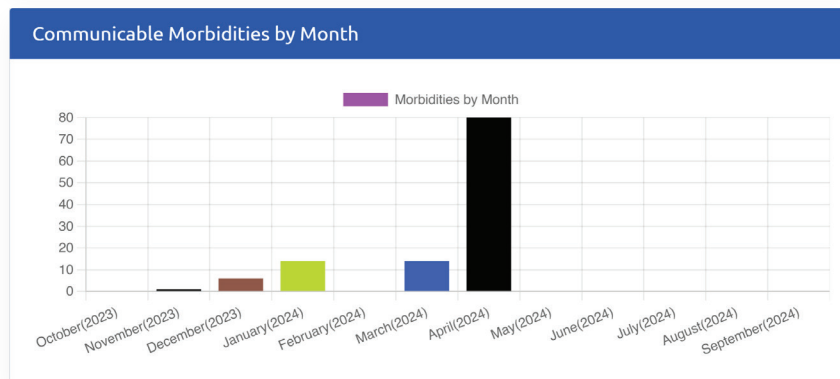

- 5a. **Backend Dashboard:** You can define your search based on the following: Start Date, End Date, Gender, Age, Location, Race, Ethnicity, Morbidity. By default, the system will display all data in the system.

Communicable Disease, cont.

5a. Backend Dashboard, continued.
